in this book the authors draw on what is known largely from recent research about the nature of genes and cells the genetics of development and animal and plant body plans intra and interorganismal communication sensation and perception to propose that a few basic generalizations along with the modified application of the classical evolutionary theory can provide a broader theoretical understanding of genes evolution and the diverse and complex nature of living organisms

analyzing animal development in a comparative framework provides a unique window into evolutionary history with a long tradition that dates back to iconic 19th century zoologists such as ernst haeckel and charles darwin evolutionary developmental biology is firmly rooted in morphological research while studies using a classical model system approach have resulted in considerable methodological progress in particular by establishing molecular genetic tools to tackle questions surrounding animal development it quickly became obvious that a broad comparative dataset involving as many taxa as possible is necessary for sound evolutionary inferences thus today s evodevo embraces morphological molecular and experimental procedures interpreted in a phylogenetic framework in order to answer key questions that revolve around the evolution of animal cell types organ systems and ultimately entire species
